

Automated Network Request Management

Customer Journey Map — ServiceNow-based network request submission, processing, approval, fulfillment, and follow-up

SCENARIO		Requesting, approving, fulfilling, tracking, and closing a network service request through ServiceNow			
JOURNEY	Entice How does someone initially become aware of this process?	Enter What do people experience as they begin the process?	Engage What happens in the core moments in the process?	Exit What do people typically experience as the process finishes?	Extend What happens after the experience is over?
Steps	Employee realizes a network service is needed and is directed to the ServiceNow portal.	User opens the ServiceNow portal and signs in.	User selects the Network Request catalog item and enters required details.	Request is routed for approval and fulfillment; status updates are visible.	User receives closure confirmation and can review the completed request.
Interactions	ServiceNow portal, internal guidance, help/support channels.	Portal navigation, catalog search, request form.	Variables such as request type, location, access details and business justification.	Approver and network support team review, update, and complete tasks.	Email/in-app notification, request history, closure information.
Goals & motivations	Help me know where to raise a network request.	Help me start the request quickly.	Help me provide the right information without confusion.	Help me know who is handling my request and when it will be completed.	Help me confirm that my network issue/service need is resolved.
Positive moments	A single standard portal provides a clear entry point.	The catalog item is easy to find and the form is structured.	Required fields and choices reduce incomplete submissions.	Automated routing, approvals, SLAs and notifications improve visibility.	Clear closure message and request history provide confidence.
Negative moments	Users may not know which request type to choose.	Too many catalog options can make navigation confusing.	Missing or unclear information can cause rework or delays.	Manual approvals or fulfillment dependencies may slow completion.	Users may be unsure whether the request is fully closed.
Areas of opportunity	Promote a clear Network Request entry point and simple guidance.	Use intuitive categories, search and concise descriptions.	Add smart defaults, validation, examples and conditional fields.	Automate assignment, approvals, SLA tracking and proactive notifications.	Provide closure summary, feedback option and searchable request history.

ServiceNow focus: standardized catalog intake • mandatory/validated variables • automated assignment • approval workflow • SLA visibility • notifications • request tracking • closure and feedback
