

Project Design Phase-II

Data Flow Diagram & User Stories

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. For the Automated Network Request Management project, the DFD shows how a requester submits a network request through the ServiceNow Service Catalog, how the request moves through approval and workflow automation, and how the approved request is passed to the IT/network fulfillment process. It also shows where request and task information is stored and how status updates are returned to the requester.

DFD Level 0 (Industry Standard)

User Stories

Use the below template to list the user stories for the Automated Network Request Management product.

Date	15 August 2026
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Requester (Employee)	Request Submission	USN-1	As a requester, I can submit a network request through the ServiceNow Service Catalog by providing the required request details.	I can submit the request successfully and receive a request number.	High	Sprint-1
	Request Submission	USN-2	As a requester, I can select the appropriate network request type and enter the required variables in the catalog form.	Required fields are validated and the request cannot be submitted with missing mandatory information.	High	Sprint-1
	Request Tracking	USN-3	As a requester, I can view the status of my submitted network request.	I can view the current request status and relevant task information.	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
	Notifications	USN-4	As a requester, I receive notifications when my request is submitted, approved, rejected, or completed.	I receive the correct notification for each major request status change.	Medium	Sprint-2
Network Approver	Approval	USN-5	As an approver, I can review the network request details and approve or reject the request.	The approval decision is recorded and the workflow moves to the appropriate next stage.	High	Sprint-2
IT / Network Team	Fulfillment	USN-6	As a network team member, I can receive an automatically generated fulfillment task for an approved request.	The assigned task contains the required request information and can be updated to completion.	High	Sprint-2
Administrator	Automation	USN-7	As an administrator, I can configure catalog variables, approvals, workflows, assignments, and notifications for network requests.	Configured rules execute correctly when a request is submitted or its status changes.	Medium	Sprint-3
